**Butler Community College**  
**Department of Nursing**  
**Pre-scenario Work Sheet**

Name \_\_\_\_\_

Date \_\_\_\_\_

Scenario \_\_\_\_\_

You are preparing to do a clinical scenario for clinical make-up, remediation or other reasons. To help your time in the lab be a more valuable learning experience please complete the following work sheet prior to coming to the lab. You will need to make an appointment and look up the medications for the scenario in advance. This will count as one hour of prep time for your scenario.

1. Define the patient's diagnosis (primary and secondary) of \_\_\_\_\_.

2. List at least two appropriate nursing diagnosis for this patient.

3. What major symptoms would you expect to see with this diagnosis?

4. What major complications may occur with this diagnosis?

5. Look up the patient's ordered medications (safe dose, compatibility, major side effects, nursing considerations and other information pertinent to this medication).

6. Wear your clinical uniform (including stethoscopes etc.) to do scenarios in the lab.

### CLINICAL LEARNING CENTER SCENARIOS

Class	Subject	Skills incorporated	Prep time	Lab time
PCT	Patient communication (4 scenarios)	Vital signs, discontinue a foley catheter, patient communication	15 minutes	1 hour (for all 4)
NR105	Long term care: Parkinson's Disease	Foley catheter insertion, oral medications, vital signs, fall risk assessment and physical assessment	30 minutes	45 minutes
NR105	Surgery, wound infection	Dressing change, apply oxygen, insert NG tube, Foley catheter insertion, vital signs	30 minutes	45 minutes
NR105	Pneumonia	Respiratory assessment, oral medications, apply oxygen	20 minutes	45 minutes
NR106	Placenta Previa	IV insertion, vital signs, IV medication administration, Completion of a consent for surgery form	15 minutes	45 minutes
NR106	Asthma (acute exacerbation)	Start an IV, IV medication administration, oxygen administration, respiratory assessment, patient teaching	20 minutes	1 hour
NR106	Bacterial Meningitis/seizures	Start an IV, IV medication administration, neurological assessment	30 minutes	1 hour
NR106	Pregnancy induced hypertension And help syndrome	Assessment of the prenatal patient, IV medication administration	2 hours	45 minutes
NR106	Enteral tube Feeding * (3 different scenarios)	Tube feeding and medication administration through an enteral tube	10 minutes	20 minutes
NR202	Angina	Start an IV, IV medication administration, specific Cardiac patient teaching and assessment	20 minutes	40 minutes
NR202	Sepsis	Culture a wound, IV medication administration, Insert an NG tube, vital signs	20 minute	45 minutes
NR202	COPD	Administer IV medications, hang a continuous IV, write a discharge plan/patient teaching, respiratory assessment	45 minutes	45 minutes
NR203	Forth semester skills* (5 scenarios)	Vital signs, apply oxygen, Foley catheter insertion, Physical assessment, IV medication administration	15 minutes	45 minutes
NR 203	Management	Time management, critical thinking, med administration	20 minutes	45 minutes

Note: Lab time includes debriefing. Scenarios created by instructors for their classes are not included.

\* denotes skills check off scenario.
